

Professional Summary

Staff/Senior Engineer & Engineering Manager with 10+ years of experience architecting resilient distributed systems and driving high-impact engineering leadership across e-commerce, media, and fintech (Java/Kotlin, Spring Boot, AWS). Proven track record of spearheading high-traffic monolith decompositions—including end-to-end extraction of mission-critical transactional domains (Promocodes & Rewards) and leading crisis team turnarounds to lift delivery predictability from 20% to 85–100%. Adept at bridging deep hands-on technical execution with cross-functional leadership to eliminate single points of failure, accelerate time-to-market, and deliver multi-million dollar revenue growth.

Employment

Staff Engineer	Dcloud.tech	Aug 2025 – Present
- Architected and delivered the E2E extraction of the Promocodes & Rewards engine into two isolated microservices—authoring the RFC, defending the target design at the Architecture Committee, implementing the services from scratch, and rolling out a zero-downtime canary release backed by comprehensive Grafana dashboards and load testing. - Spearheaded enterprise microservices migrations for high-load e-commerce and global telecom clients, decomposing legacy monoliths to handle 2000+ RPS with 99.95% uptime. - Built and launched an internal AI hiring platform (RAG Resume Search, automated screening, Speech/Text processing), cutting average time-to-hire by 50% (from 4 weeks to 2 weeks). - Established production excellence frameworks from scratch across client teams—introducing tech-debt governance, on-call rotations, SLA/SLOs, alerting, and incident reaction process to cut MTTR by 67% (90 min -> 30 min). - Led technical pre-sales and architectural discovery, designing target-state system architectures for multiple enterprise clients. Technologies: Java, Kotlin, Spring Boot, Microservices / SOA, Kubernetes, PostgreSQL, Redis, Grafana		
Engineering Manager	Uzum Market	Mar 2024 – Aug 2025
- Led the anti-crisis turnaround of a 9-engineer cross-functional team (Backend, iOS, Android, Web, QA) managing high-traffic marketplace CJMs (Main Page, Promotions) after extreme leadership turnover (6 EMs in 10 months). - Boosted sprint commitment rate from 20–30% to a consistent 85–100% by establishing capacity-based planning, defining a clear SDLC, and securing a dedicated tech-debt quota. - Spearheaded the architectural decomposition of the monolith across core domains (Main Page, Promocodes, Reward Center, Offers) - Eliminated critical main page crashes and pulled the Android app out of the UI-lag red zone. - Delivered major business impact, generating +\$1.45M incremental GMV, +1.7% CR2Order, +10.1% registration conversion, and \$10.5M in social project GMV (laying the foundation for a \$17M ARR banking initiative). - Strengthened team capability and technical standards by making strategic senior hires (iOS, QA). Technologies: Java, Postgres, K8s, Grafana, Sloth, Jaeger, OpenSearch, Clickhouse, GrowthBook		
Engineering Manager	Warner Music Group	Sep 2021 – Mar 2024
- Led a distributed cross-functional engineering team (15 engineers) across backend, frontend, and QA to build and operate global media delivery system. - Architected and launched a cloud-native global music distribution platform on AWS, delivering the end-to-end system within a strict 8-month timeline. - Engineered a proprietary compression algorithm for audio spectral charts, reducing AWS storage costs by 33%. - Designed and rolled out an Attribute-Based Access Control (ABAC) service, ensuring strict music-industry compliance and granular rights management across workflows. Technologies: Java, Node.js, Spring Boot, AWS (Lambda, SQS, Aurora, DynamoDB, Step Functions, S3, CloudFront, EC2, API Gateway, CDK), Okta		
Engineering Manager	National Railways	Jan 2021 – Sep 2021
Led the end-to-end delivery of a mission-critical Medical Clearance MVP from 0 to 1 in under 4 months, directing a cross-functional team of 10 engineers under strict enterprise deadlines and regulatory constraints.		

- Architected a real-time WebRTC telemedicine pipeline, enabling low-latency, encrypted video consultations between edge railway medical terminals and remote clinicians.
- Engineered a distributed session-state backbone using Redis Streams and Kafka, overcoming complex WebSocket load-balancing bottlenecks to achieve 99.9% session reliability during network degradation.
- Designed a compliant identity verification and vitals-capture subsystem, implementing zero-trust data transit security, Keycloak OIDC/OAuth2 auth, and immutable audit logging.

Technologies: Java, Kotlin, Spring Boot, WebRTC, Redis Streams, Apache Kafka, PostgreSQL, Python, FastAPI, Kubernetes, Keycloak (OAuth2/OIDC), ELK

Staff Software Engineer

VTB Bank

Jan 2018 – Jan 2021

- Architected a high-throughput (800+ TPS) core brokerage platform, guaranteeing zero data loss via Apache Kafka, Debezium CDC, and Transactional Outbox patterns.
- Led the architecture and technical delivery of a distributed ecosystem (50+ microservices) for real-time SME credit risk scoring, enabling sub-second decision-making.
- Engineered an enterprise multi-channel notification backbone with strict exactly-once delivery guarantees.
- Designed a high-security Wealth Management CRM, modernizing core advisory workflows and cutting operational handling time by 40%.

Technologies: Java, Spring Boot, Microservices, Kubernetes, Istio, Apache Kafka, Debezium, Hazelcast, PostgreSQL, MongoDB, ELK, Keycloak (OAuth2/OIDC)

Senior Java Engineer

Avaya

Oct 2016 – Jan 2018

Python Developer

Kaspersky Lab

Jan 2016 – Oct 2016

Skills

- **Languages & Frameworks:** Java 17/21, Kotlin, Python, Flask, FastAPI, Spring Boot (Data, Security, Cloud).
- **Architecture & Design:** Microservices, Distributed Systems, Highload, Event-Driven Architecture (EDA), Event Storming,DDD, Hexagonal/Clean Architecture, BFF, SAGA, Outbox Pattern.
- **Patterns & Principles:** GoF, GRASP, SOLID, EIP, Resilient patterns (Circuit Breaker, Retry, Rate Limiting, Throttling).
- **Data Layer:** PostgreSQL, MongoDB, Redis, Redis Streams, MySQL, Oracle, JOOQ, Spring Data, Hibernate, Hazelcast, Debezium (CDC), ELK Stack.
- **Infrastructure & Cloud:** Kubernetes, Istio, Docker, GCP, Spring Cloud Gateway, Nginx.
- **AWS:** SQS, Lambda, Step Functions, S3, CloudFront, DynamoDB, Aurora, EC2, KMS, Secrets Manager, API Gateway, CDK.
- **Integrations & Streaming:** Apache Kafka, RabbitMQ, ActiveMQ Artemis, gRPC, REST, WebSockets, HTTP, TCP/UDP.
- **Security:** Keycloak, OKTA, OIDC, OAuth2, RBAC/ABAC, mTLS, WAF, HashiCorp Vault.
- **Observability & Tools:** Prometheus, Grafana, OpenTelemetry, Micrometer, Jaeger, Zipkin, OpenSearch, OpenAPI, AsyncAPI, Git.
- **BPM & Workflows:** Camunda, Temporal, Netflix Conductor.
- **AI:** OpenCode, DeepSeek V4 Pro, Claude, Codex, LangChain, Prompt Engineering, ChromaDB.

Education & Certifications

- Master of Software Engineering, Moscow State Technological university "Stankin", 2020-2022
- Bachelor of Computer Science, Moscow State Technological university "Stankin", 2016-2020
- GCP Professional Cloud Developer (2024), AWS Solutions Architect Professional (2023), Certified Kubernetes Administrator - CKA (2023), Oracle Java SE 17 (2022)

Achievements

- Two-time National Mathematics Champion (2017, 2018)
- Java Programming Course Instructor, Moscow State Technological University "Stankin" (2020–2022)
